

ND ALLISON HRWW

Characteristics

Yield	High
Protein	Good
Winter Hardiness	Excellent

ND ALLISON

ND ALLISON - a new winter wheat variety developed at North Dakota State University (NDSU) in Fargo, North Dakota by Dr. G. Francois Marais and his breeding team. When comparing to the cultivar Jerry, ND Allison has shown to have 1-2 inch shorter straw, similar maturity date, and also exhibits the same strong winter hardiness we see in Jerry. ND Allison is a very high yielding variety with a broad adaptation as demonstrated in the performance of the ND statewide Elite and Variety Trials. This variety is more tolerant of acidic soils. Based on molecular marker data, ND Allison is believed to have the aluminum tolerance locus, TaALMT1, that is located on chromosome 4DL and which may give it an advantage in localities associated with aluminum toxicity. ND Allison is resistant to leaf rust, moderately resistant to moderately susceptible to certain US stem rust races (it is heterogeneous for the presence of Sr24) and moderately resistant to tan spot and SNB. ND Allison has good test weight, good protein and has satisfactory processing quality.

STRENGTHS

- Best Winter Hardiness on the Market
- Gene for Aluminum Toxicity Tolerance
